

Gladius Data Protection Appliance powered by Backup Exec

All in one Disaster Recovery, Deduplication, and Storage Appliance

OVERVIEW

The Gladius Disaster Recovery Appliance is a pre-installed and packaged hardware plus software, ransomware resilient, data protection system. Now you can deploy a market leading backup and recovery solution in an easy to install and maintain form factor that can scale as your data needs grow. Designed to be immutable, your backups will be secure from ransomware with the the Gladius Appliance and the ability to tier to a secure cloud storage platform for long term retention. Simply put, this system can manage all your data, regardless of where it resides: Virtual, Physical, On-Premise, or Cloud.

Designed to protect small and medium organizations, VERITAS Backup Exec software sits on a Dell PowerEdge server with 1.5-2x internal storage capacity so you can retain multiple backups on disk and plan for growth. Adding onto the appliance is as simple as increasing disk storage or adding nodes as needed. Each Gladius Appliance bundle comes packaged with the software, hardware, and installation to ensure your backup environment and policies are optimized for your needs. The Gladius Appliance partners with Wasabi to provide secondary storage tiering to the cloud at a minimal uplift. The Wasabi Cloud Storage Platform is immutable, ransomware protected storage on disk for quick and easy disaster recovery if needed.

CUSTOMER CHALLENGES

- Risk of ransomware attacks is increasing
- Multiple products needed for virtual, physical, on-premise, or cloud workloads
- Poor reporting on backups
- Storage costs outpace budget
- Maintaining compliance without overspending
- Difficult installation, or remote office installation is cumbersome

BENEFITS

- An all-in-one data protection solution for virtual, physical, public and hybrid cloud environments
- Ensure on-demand and fast recovery from a ransomware attack
- Supports long-term and off-site storage to multiple cloud vendors, including AWS, Microsoft Azure, and Wasabi
- Tier directly to tape with optional tape library add-on
- Able to hit Recovery Point Objective (RPO) and Recovery Time Objectives (RTO)
- Deduplication and compression everywhere maximizes return on investment (ROI) with on-premise and cloud storage
- Blocks unauthorized users from viewing data with integrated 128-/256-bit AES industrial-strength encryption and compliance with the Payment Card Industry Data Security Standard (PCIDSS) 3.1/3.2

3 DIFFERENT TIERS TO FIT YOUR NEEDS

Dell PowerEdge R450

- 4TB BE Silver Capacity
- 7.2 TB usable storage
- 1x CPU, 16 GB RAM

Dell PowerEdge R540

- 8TB BE Silver Capacity
- 14 TB usable storage
- 2x CPUs, 64 GB RAM
- Redundant Power Supply

Dell PowerEdge R550

- 16TB BE Silver Capacity
- 24 TB usable storage
- 2x CPUs, 64 GB RAM
- Redundant Power Supply

**All options come with mirrored OS SSD, and 3 years of support*

Let's Talk

We discuss with customers every day that have difficulties simplifying their backup and recovery. Whether they have multiple products, skyrocketing storage and cloud costs, difficulties with increased compliance requirements, or concerns over ransomware impacts, we can help.

Currently used in Federal, State, and Local Governments as well as Healthcare and Education entities, Backup Exec has been a market leader and reliable way to simplify, secure, and unify under a single backup platform. Now the great capabilities of Backup Exec are available in a custom built form factor to ensure easy installation and management.
